

OIL AND GAS FIELDS IN NORWAY

INDUSTRIAL HERITAGE PLAN

NORSK OLJEMUSEUM

ACKNOWLEDGEMENTS

This book is a result of a project initiated by the Norwegian Petroleum Museum to develop an industrial heritage plan for the offshore petroleum industry in Norway. The project was sponsored by the Ministry of Petroleum and Energy, the Norwegian Petroleum Directorate and the Norwegian Oil Industry Association.

Work on this plan has offered many professionally interesting challenges, and has involved a number of people and organisations. Without their collaboration, it would not have been possible to complete the project. That applies particularly to my colleague, Gunleiv Hadland, who has collected and processed most of the background material.

Big thanks also go to the steering and reference group which has helped to define the broad lines of this planning job, discuss important delimitations and quality-assure the text. They are Rolf Wiborg, Norwegian Petroleum Directorate, Gustav Rossnes, Norwegian Directorate for Cultural Heritage, Maiken Ims, Norwegian Oil Industry Association, Finn E Krogh, Norwegian Petroleum Museum, Sveinung Sletten, Pétoro, Jorunn B Eia, BP Norge AS, Oddveig Haga, A/S Norske Shell, Finn Roar Aamodt, Statoil, Dag Bergslien, ExxonMobil, and Dag Olaf Ringe, Total E&P Norge.

Many contributors from various companies and organisations have been a great help and have contributed valuable suggestions. The most prominent of these are Jan A Tjemsland and Kristin Øye Gjerde, Norwegian Petroleum Museum, Ole Andreas Engen, University of Stavanger, Stig Kvendseth and Elsa Dørr Skinstad, ConocoPhillips, Andreas Middelthon, Talisman Energy, Lars Olaf Eide and Kjell Varlo Larsen, Gassco, Åshild Finnestad, Iris, Jon Harald Kaspersen, Sintef, and Anders Nesheim, Baker Hughes.
